Art Unit: 2123

DETAILED ACTION

- This Office Action is in response to a Request for Continued Examination filed July 10, 2007. No claims were added or canceled. Claims 1, 3-5 and 7 28 are pending, and have been examined.
 Claims 1, 3-5 and 7 28 have been rejected.
- 2. The indicated allowability of claims 1, 3-5 and 7 28 is withdrawn in view of new reference(s).

 Rejections based on the newly cited reference(s) follow.

Continued Examination Under 37 CFR 1.114

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 7, 2007, has been entered.

Response to Remarks

- 4. Regarding claims 1, 3-5 and 7 28 rejected under 35 USC § 112, second paragraph:
 - **4.1.** Applicant's arguments have been fully considered, and are persuasive. However, new rejections are made below under 35 USC § 103.

Art Unit: 2123

Claim Rejections - 35 USC § 103

Page 3

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 7. Claims 1, 3, 4, 9, 10, 11, 13, 16, 17, 18, 20 and 23 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Devine (U.S. Patent 6,397,242, May 28, 2002) in view of Klaiber (Klaiber, Alexander; "The Technology Behind Crusoe Processors", January 2000, www.transmeta.com/pdfs/paper_aklaiber_19jan00.pdf), further in view of Rosenblum (Mendel Rosenblum et al.; "Complete Computer System Simulation: The SimOS Approach", Winter 1995, IEEE Parallel & Distributed Technology, pages 34 43).
 - 7.1. Regarding claims 1, 9, 16 and 23:

Art Unit: 2123

7.1.1. Devine appears to teach a monitor executing on the host machine that translates the machine instructions into translated code (*column 8, lines 1 - 4; column 21, lines 60 - 67; and column 22, lines 1 - 21*).

- 7.1.2. Devine appears to teach a virtual machine executing on the host machine that executes the translated code stored in memory (column 10, lines 51 54; and column 22, lines 7 8; and column 25, lines 23 46 [especially lines 36 46]).
- 7.1.3. Devine appears to teach a kernel executing on the host machine that detects exceptions occurring in the virtual machine and transfers control between the virtual machine and the monitor according to the type of exception (*column* 14, *lines* 56 62; *and column* 17, *lines* 33 39; and column 17, lines 44 50; and column 22, lines 45 55).
- **7.1.4.** Devine does not specifically teach:
 - 7.1.4.1. a monitor executing on the host machine that translates the machine instructions into translated code, the monitor modifying original values in a descriptor table to prevent the translated code from being accessed, thereby preventing the translated code from being modified.
 - 7.1.4.2. wherein an operating system executing on the host machine also supports a full platform simulator that includes simulation modules and device models, the simulator executing the translated code that represents simulated operating system code to be executed on the virtual machine, and wherein results of executing the translated code are provided to a user.
- 7.1.5. Klaiber appears to teach the monitor modifying original values in a descriptor table to prevent the translated code from being accessed, thereby preventing the translated code from being modified (*Klaiber, page 14, section "Coping with Self-modifying code", fourth sentence*).

Art Unit: 2123

7.1.6. Rosenblum appears to teach:

7.1.6.1. an operating system executing on the host machine also supports a full platform simulator that includes simulation modules and device models (page 35, figure 1, "SimOS target hardware layer" and "Host Platform" layer), the simulator executing the translated code that represents simulated operating system code to be executed on the virtual machine (page 35, right-side column, section "The SimOS environment", and page 36, left-side column, first paragraph, and fourth paragraph; and page 36, right-side column, second paragraph that starts with, "SimOS also includes . . "), and wherein results of executing the translated code are provided to a user (page 35, left-side column, third paragraph that starts with, "The other feature . . . ", sentence that starts with, "Statistics collected "; it would have been obvious that the statistics were provided to a user).

- 7.1.7. The motivation to use the art of Rosenblum with the art of Devine would have been the multiple benefits recited in Rosenblum, including an extremely fast simulation of system hardware (page 35, left-side column, second paragraph) and a fast simulation mode that allows positioning of long-running workloads is essential for performance studies (page 43, left-side column, second paragraph), which would have been recognized as benefits by the ordinary artisan.
- 7.1.8. The motivation to use the art of Klaiber with the art of Devine is the benefit recited in Klaiber of a solution that combines strong performance with remarkably low power consumption (Klaiber, page 3, section "Summary", first sentence). Therefore, as discussed above, it would have been obvious to the ordinary artisan at the time of invention to use the art of Klaiber and the art of Rosenblum with the art of Devine to produce the claimed inventions.
- 7.2. Regarding claims 3, 11, 18 and 24:

Art Unit: 2123

7.2.1. Devine appears to teach that the translated code and the original machine instructions access the memory using a same set of addresses as a set of addresses used by the original machine instructions (*column 10, lines 50 – 55; and column 1, lines 45 - 67*).

Page 6

7.2.1.1. Regarding (*column* 10, *lines* 50 – 55; *and column* 1, *lines* 45 - 67); since the virtual machine directly executes instructions on the underlying hardware, it is obvious that the translated code and the original machine instructions access the memory using a same set of addresses as a set of addresses used by the original machine instructions.

7.3. Regarding claims 4 and 25:

- 7.3.1. Devine appears to teach that the monitor further includes an auxiliary simulator that executes the machine instructions (*column* 21, *lines* 61 67; and column 22, *lines* 1 6).
 - 7.3.1.1. Regarding ($column\ 21$, $lines\ 61\ -\ 67$; and $column\ 22$, $lines\ 1\ -\ 6$); since the translator calls the VMM to execute certain machine instructions, it is obvious that the monitor further includes an auxiliary simulator that executes the machine instructions.

7.4. Regarding claims 13 and 20:

- **7.4.1.** Devine does not specifically teach that the monitor modifies a descriptor table to prevent the translated code from being modified.
- 7.4.2. Klaiber appears to teach that the monitor modifies a descriptor table to prevent the translated code from being modified (*Klaiber, page 14, section "Coping with Self-modifying code", fourth sentence*).

7.5. Regarding claims 10 and 17:

7.5.1. Devine does not specifically teach simulating a device.

Art Unit: 2123

7.5.2. Rosenblum appears to teach simulating a device (page 38, right-side column, section

Page 7

"Device simulation").

8. Claims 5, 12, 19 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Devine and

Klaiber and Rosenblum as applied to claims 1, 3, 4, 9, 10, 11, 13, 16, 17, 18, 20 and 23 - 25 above,

further in view of Lawton (Lawton, Kevin; "Running multiple operating systems concurrently on an

IA32 PC using virtualization techniques", www.anticracking.sk/EliCZ/import/Vx86.txt).

8.1. Devine as modified by Klaiber and Rosenblum teach a system, method and computer

program product for simulating machine instructions on a host machine as described in claims 1, 3, 4,

9, 10, 11, 13, 16, 17, 18, 20 and 23 - 25 above.

8.2. Regarding claims 5, 12, 19 and 26:

8.3. Devine appears to teach:

8.3.1. the capsule being one of a simple capsule and a complex capsule, and wherein simple

capsule is executed by the virtual machine and a complex capsule is executed by the virtual

machine monitor (column 1, lines 59 - 67, and column 2, lines 1 - 5).

8.4. Devine does not specifically teach that the monitor replaces one of the machine instructions

with a capsule if the machine instruction accesses a system state of a central processing unit of the

host machine.

8.5. Lawton appears to teach that the monitor replaces one of the machine instructions with a

capsule if the machine instruction accesses a system state of a central processing unit of the host

machine (page 3, section "CHALLENGE ON THE IA32", paragraphs 1 - 3).

Art Unit: 2123

8.5.1. Regarding (page 3, section "CHALLENGE ON THE IA32", paragraphs 1 – 3); trapping out is equivalent to a capsule.

- 8.6. The motivation to use the art of Lawton with the art of Devine as modified by Klaiber and Rosenblum would have been the benefit recited in Lawton to run a primary PC operating system and related software while retaining the ability to concurrently run software engineered for a different PC operating system (page 1, section "THE RATIONALE FOR VIRTUALIZATION", first paragraph). Therefore, as discussed above, it would have been obvious to the ordinary artisan at the time of invention to use the art of Lawton with the art of Devine as modified by Klaiber and Rosenblum to produce the claimed inventions.
- 9. Claims 7, 8, 14, 15, 21 22 and 27 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Devine as modified by Klaiber and Rosenblum as applied to claims 1, 3, 4, 9, 10, 11, 13, 16, 17, 18, 20 and 23 25 above, further in view of Stallings (Stallings, William; "Operating systems: internals and design principles", 1998, Prentice-Hall).
 - 9.1. Devine as modified by Klaiber and Rosenblum teach a system, method and computerprogram product for simulating machine instructions on a host machine as described in claims 1, 3, 4,9, 10, 11, 13, 16, 17, 18, 20 and 23 25 above.
 - 9.2. Regarding claims 7, 14, 21 and 27:
 - **9.2.1.** Devine does not specifically teach that the monitor modifies the descriptor table to remove a portion of a segment that overlaps with the memory storing the translated code.
 - 9.2.2. Stallings appears to teach that the monitor modifies the descriptor table to remove a portion of a segment that overlaps with the memory storing the translated code (page 334, section labeled "Segmentation", sub-section labeled "Virtual Memory Implications", second paragraph, especially item number 1, sentence 3; and pages 307 309 section 7.4 Segmentation).

Art Unit: 2123

Page 9

- 9.2.2.1. Regarding (page 334, section labeled "Segmentation", sub-section labeled "Virtual Memory Implications", second paragraph, especially item number 1, sentence 3; and pages 307 309 section 7.4 Segmentation); since the advantage of segmentation was that the operating system will shrink a segment as needed, it would have been obvious that the monitor modifies the descriptor table to remove a portion of the segment that overlaps with the memory storing the translated code.
- 9.2.3. The motivation to use the art of Stallings with the art of Devine is the advantage recited in Stallings that segmentation simplifies the handling of growing data structures, and the operating system will expand or shrink the segment as needed (page 334, section labeled "Segmentation", sub-section labeled "Virtual Memory Implications", second paragraph, especially item number 1, sentence 3). Therefore, as discussed above, it would have been obvious to the ordinary artisan at the time of invention to use the art of Stallings with the art of Devine as modified by Klaiber and Rosenblum to produce the claimed inventions.

9.3. Regarding claim 8, 15, 22 and 28:

- **9.3.1.** Devine does not specifically teach that the monitor modifies the descriptor table to replace a segment with a substitute segment, which, when accessed, causes an exception to be generated.
- 9.3.2. Stallings appears to teach that the monitor modifies the descriptor table to replace a segment with a substitute segment, which, when accessed, causes an exception to be generated (page 335, section labeled "Organization", first paragraph, especially the sentence that starts with "Because only some of the segments of a process may be in main memory ..."; and page 324, figure 8.2b; and pages 324 325, section labeled "Paging"; and pages 319 320, section 8.1

Application/Control Number: 10/025,217 Page 10

Art Unit: 2123

"Hardware and Control Structures", especially page 320, the paragraph that starts with "Let us consider . . .").

9.3.3. The motivation to use the art of Stallings with the art of Devine is the benefit recited in Stallings that it is not necessary for all of the segments to be in memory during execution (<u>page</u> 319, section 8.1 "Hardware and Control Structures").

10. Examiner's Note: Examiner has cited particular columns and line numbers in the references applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the Applicant in preparing responses, to fully consider the references in their entirety as potentially teaching all or part of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

Conclusion

- 11. The prior art made of record and not relied upon is considered pertinent to the Applicant's disclosure:
 - 11.1. Abraham Silberschatz et al., "Operating System Concepts", Fifth edition, 1999, John Wiley & Sons, pages 264 265; teaches read-only memory protection bits.

Art Unit: 2123

12. Any inquiry concerning this communication or earlier communications from the examiner should be

directed to Russ Guill whose telephone number is 571-272-7955. The examiner can normally be

reached on Monday - Friday 10:00 AM - 6:30 PM.

13. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul

Rodriguez can be reached on 571-272-3753. The fax phone number for the organization where this

application or proceeding is assigned is 571-273-8300. Any inquiry of a general nature or relating to

the status of this application should be directed to the TC2100 Group Receptionist: 571-272-2100.

14. Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained

from either Private PAIR or Public PAIR. Status information for unpublished applications is

available through Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the

Electronic Business Center (EBC) at 866-217-9197 (toll-free).
